

# UtiliCenter

Central manager for all field meter swapping activity providing the dispatcher and manager with a 360 degree view of the field operation for Utilities

Portal

Creating and assigning tasks, accessing customer information, managing jobs and technicians with real time mapping data, the portal provides an easy to use command console that can assign, track, manage and report on all project activities.

UtiliTracker simplifies your entire service operation. This feature rich mobile application provides your field service work force with the ability to work with or without network connectivity. Cumbersome paperwork is eliminated and calls into the home office are reduced.

Tracker

UtiliTracker delivers a set of automated capabilities intended to streamline and improve management of field service activities. By automating workflow, field service representatives are able to efficiently receive, complete and document assignments, manage equipment assets, capture expenses and critical site data for operations analysis and management reporting.
